

DEHYDRATED BARLEY SILAGE

OVERVIEW

- Grown in the foothills of the Rocky Mountains in Alberta **Canada**. Albertan Barley silage is a palatable, functional forage to build a ration around.
- Dehydrated barley silage is a consistent quality forage with **highly digestible fiber**, protein comparable with timothy, and strong levels of starch.
- Starch derived from the fermented barley grain has **high rumen digestibility** and availability.

HARVESTING, PACKING, ENSILING AND PROCESSING

- Barley is **chopped at the optimal time** in the plants life cycle utilizing state-of-the-art silage processing technology
- Chopped Barley is packed and sealed creating an **airtight environment for ensilation**
- Silage fermentation period after harvest is a minimum of **90 days**
- Utilizing energy efficient double pass technology keeps **low temperatures** and **optimal drying conditions**

QUALITY CONTROL

- Wet and dehydrated samples are **regularly taken** and **analyzed** for nutritional values in registered testing facilities
- Product moisture levels are **closely monitored** throughout production for consistent levels
- **Foreign objects are removed** during production to ensure **pure product**

PRODUCT SIZE

- **Mini bales**
(strapped and wrapped in bundles of 18)
approximately 40kg/bale
- **Sleeve bales**
approximately 450kg/bale

COMMON FEEDING METHODS

- Start feeding dehydrated Barley silage at 1-3kg/day, adjust as needed
- Add water to or provide water while feeding dehydrated Barley silage
